

City of Steamboat Springs

FROM: Philo Shelton, Public Works Director *PSS*

DATE: July 20, 2010

RE: 2010 Engineering Specifications Issued

Pursuant to the authority granted me in the City of Steamboat Springs Municipal Code Section 20-1, I hereby adopt the attached Engineering Specifications.

The specifications were developed in consultation with engineering firms working within the City and were also sent to the Yampa Valley Construction Trades Association for comments. These specifications are required to be used on City Projects and private projects with public infrastructure, and they are available for use on private infrastructure projects as of today.

The specifications will need to be evaluated by the Project Engineer for applicability with each project. In most cases additional special provisions will be required to address the site-specific or unique technical needs of a project.

These specifications may be updated or modified in one of two ways:

Annual Update: Each year the City will update the specifications. Comments will be requested at the time of the update, but can be submitted throughout the year.

Project Update: Each City project or public infrastructure project will be required to submit specifications. At the time of the specification submittal, requests for changes or modifications may also be submitted. If approved by the City Engineer, the revisions may be applied to that and subsequent projects and will be submitted for inclusion in the annual update.
