### Lock Box Information and Rapid Entry System

#### Instant fire department access without damaging the door or building

The Rapid Entry System is designed to help fire departments and businesses work together to preserve lives and property. It eliminates the need for fire department officials to maintain and carry cumbersome key rings with hundreds of building keys.

Here's how the Rapid Entry System works:

1. The building owner purchases the Lock Box of his choice and mounts it securely near the entrance. Fire department officials lock the building keys in the Lock Box.
2. Special security keys are supplied only to authorized fire department officials.
3. When a fire alarm sounds at night or on the weekend, the fire department has instant access to the building. Access is fast, easy and safe without the need for the building owner or tenant to drive to the site after hours.

#### Lock Box Installation Locations

To standardize key lock box locations and assure that they are visible and unobstructed the following specifications shall be used.

The box shall be mounted in a location clearly visible from the street or driveway and adjacent to the entry door that leads directly to the Fire Alarm Control Panel or Remote Annunciator.

The box shall be mounted not less than 42 inches and not more than 54 inches above floor level.

Please contact Fire Prevention when the Lock Box is installed at 970-871-8216 to schedule a time for the key to be locked in the box.

Lock boxes can be purchased from your alarm contractor or [order a Lock box online](#) using SSFR System Code: **T7686** when prompted.
